pin completely
inserted into sleeve

HYPERTAC SOCKET CONTACT BRIEFLY

HYPERTAC (= HYPERboloid conTACT) is a socket contact designed and manufactured in such a manner that, implementing advanced micromechanics technology, satisfies performance requirements previously considered impossible.

The shape of the sleeve is formed by a springy wires special arrangement. When pin is inserted into this sleeve every wire stretches to accommodate it, so that wires wrap themselves around pin providing lines of current paths.

HYPERTAC SOCKET CONTACT, ADVANTAGES

1. ENVIRONMENTAL ADVANTAGES:

- no local hot spot (uniform current densities);
- self-cleaning pin insertion.

2. MECHANICAL ADVANTAGES:

- exceptional electrical continuity under vibration and shock (very low mass of springy wires, 360° current paths around pin and redundant current paths);
- low contact engagement and separation forces;
- long contact life (stable time/life contact resistance).

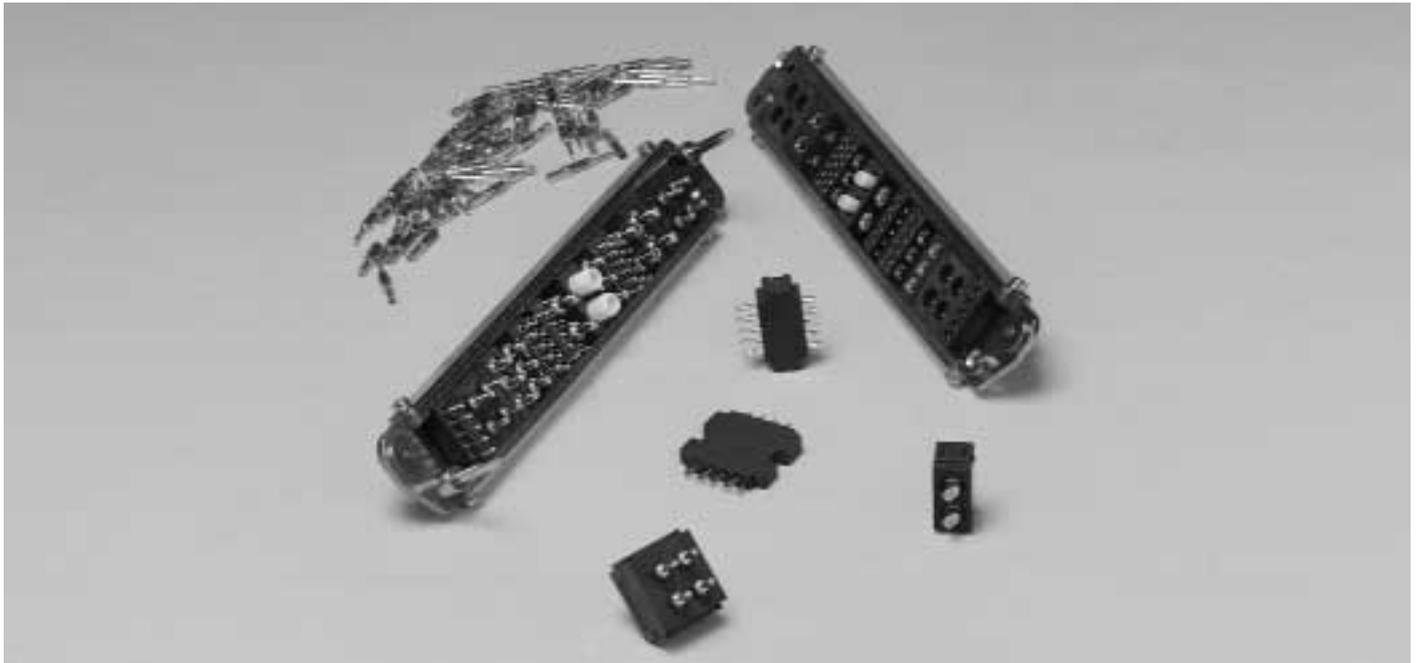

3. ELECTRICAL ADVANTAGES:

- lower contact resistance (redundant current paths);
- higher current rating (lower contact resistance);
- uniform current densities (lower current gradients).

4. USER'S ADVANTAGES:

- HYPERTAC socket contact mates every conventional cylindrical pin contact.

Modular Connectors

Hypertac® modular connectors employ a do-it-yourself system based on the building block principle.

They offer a wide variety of combinations available in a single connector frame. Thus, the user is capable of selecting the connector that fulfills the exact requirements with off-the-shelf components.

One of the many advantages of the Hypertac® contact used is its low extraction and insertion forces. In this application it enables the user to assemble large numbers of contacts into a connector which is still able to mate and unmate smoothly and easily

The modular connectors series can be built up for the following:

- Rack and panel applications
 - Standard
 - With jackscrews
 - With floating mounting
- Cable applications
 - Hooded with rounded or flat cable clamps
 - With jack screws
- Program applications

The system is composed of two basic elements: the modules and the frames.

1. The modules are the connector elements of the system. Various types of contacts are available, such as signal, power, coaxial, high voltage, etc. These contacts are mounted in small plastic blocks. Crimp contacts are also available in plastic blocks that can be mounted individually or together into the frame. The width of each module block is designated in units.

The modules have fixed contacts with:

2 contacts	@ 50 amps	(type M)
2 contacts	@ 25 amps	(type C)
2 contacts	shielded	(type E)
2 contacts	high voltage	(type H)
2 contacts	@ 200 amps	(type I)
2 contacts	fiber optic	(type Y)
3 contacts	@ 15 amps	(type B)
4 contacts	@ 15 amps	(type N)
5 contacts	@ 8 amps	(type A)
9 contacts	@ 5 amps	(type Q)
9 contacts	@ 8 amps	(type G)
17 contacts	@ 5 amps	(type D)

Coaxial contacts:

2 contacts	(type J)
2 contacts	(type K)
3 contacts	(type L)

Removable contacts:

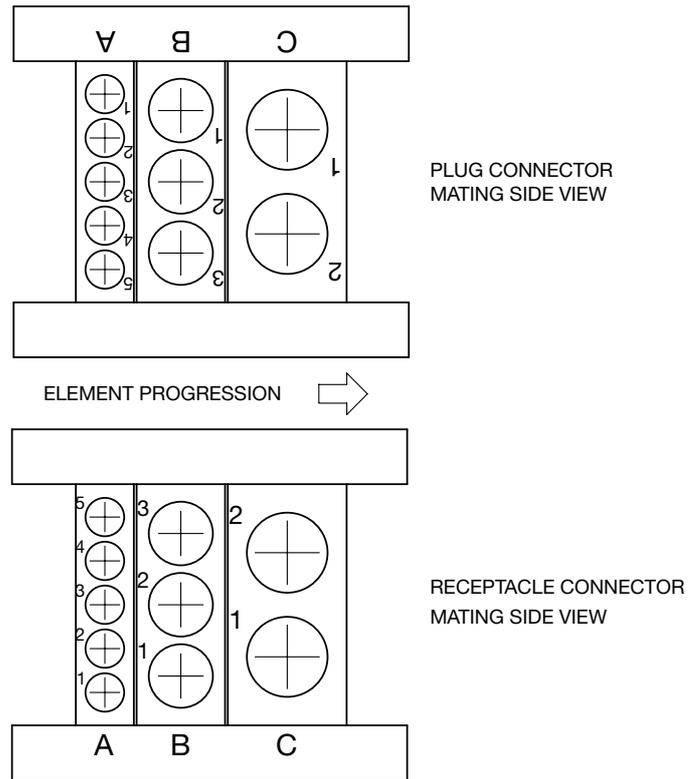

2 contacts	@ 25 or 50 amps	(type Z)
3 contacts	@ 15 amps	(type W)
5 contacts	@ 8 amps	(type T)
5 contacts	@ 8 amps	(type X)
17 contacts	@ 8 amps	(type O)
30 contacts	@ 3 amps	(type LW)

2. They range from a basic frame consisting of 2 side rails and 2 end caps to more complex versions with jack screws, hoods, cable clamps, etc. All frames are available in numerous lengths to conform to almost any combination of modules. With the modular Series, specially designed connectors can be purchased quickly and inexpensively, eliminating the extra cost and delay of custom tooling.

General notes

PROGRESSION AND SUM OF CONTACT ELEMENTS (for elements see details page 14÷35)

- The progression of the contact element is always from left to right with the element orientation (position numbering) as in drawing

Therefore a "step" is defined as the length used by each assembled element.

- An elementary step is defined as 5.50 mm

- The letter "A" is the sum of the dimensions of the contact elements.

CONTACT PLATING

OTHER PRODUCTS FROM HYPERTAC INTERCONNECT

2 TO 5 ROWS PCB CONNECTORS

- . According to MIL-DTL-55302
- . 100 000 reliable mating and unmating cycles
- . Reduces need for board stiffeners and auxiliary actuators
- . Virtual immunity to shock and vibration
- . Under 5 mΩ contact resistance

VERY HIGH DENSITY PCB CONNECTOR

- . According to MIL-DTL-55302
- . 8 row offset grid (2,54 mm contacts, 1,27 mm rows)
- . 372 contacts
- . Lightweight with high structural strength
- . Low insertion force

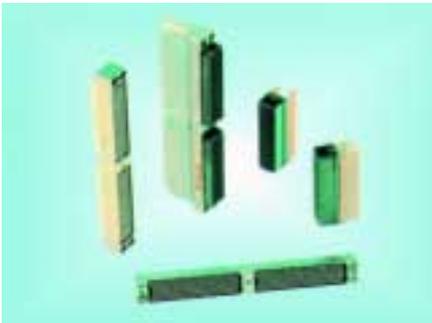

SIGNAL/POWER & COAXIAL CONTACTS

- Signal & power contacts
 - . Over 100 000 mating and unmating cycles
 - . Models for dry circuit to 500 Amps
 - . Ideal for test, burn-in and high power use
- Coaxial contacts
 - . Suits DIN 41612 cavity
 - . Over 25 000 mating cycles
 - . Low insertion force (140 grams average)

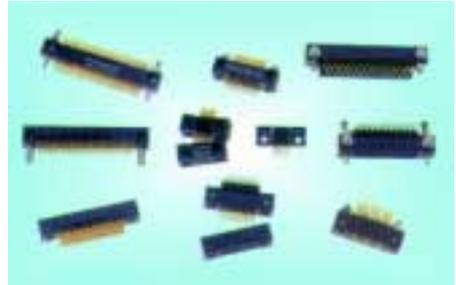

METAL SHELLED PCB CONNECTORS

- . According to MIL-DTL-55302
- . ESD insulation, EMI & RFI protection
- . Easily tailored to customer specific requirements
- . Suitable for LRM applications
- . Available as test connector, card extender and cable assembly

MIL-DTL-55302 PCB CONNECTORS

- . 2 contact rows within dielectric connector
- . Contact size of 0.76 mm nominal pin diameter
- . Number of contacts: 10-14-20-24-26-30-36-44-50-54-59-176
- . Alignment and keying provided by the end guide

AIRFRAME H71 SERIES

- . Meets performance requirements of BAe spec JN1123
- . Outstanding performance under extreme vibration conditions
- . Jackscrew mating device ensures correct mating
- . EMI & RFI protection
- . Integral environmental seal
- . Pin & socket bodies in accordance with MIL-C-39029

CIRCULAR SIGNAL CONNECTORS

- . Contact arrangement: 6 to 21 poles
- . IP67 protection (mated)
- . Nominal current: 3 to 20 A
- . Temperature range -20° to 125°C
- . Tested based on VDE 0627/09.91
- . Variable shielding connection based on standard EMC DIN EN 50082

QUICK DISCONNECT CONNECTOR

- . Plastic shelled
- . Quick disconnect enable easier mating and unmating cycles
- . 3 to 25 contacts
- . Crimp, solder terminations
